## NEW GENERATION WORKING MODEL HİDROMEK TELEOPERA

HİDROMEK Teleopera, which offers the opportunity to work remotely with unmanned machines, aims to enable the user to safely manage all functions of the machine from the office environment via a modern control workstation.

## SAFETY AND EFFICIENCY AT WORK SITES WILL INCREASE

The unmanned machines of Teleopera model are equipped with Radar (Radio Detection and Ranging), Lidar (Light Detection and Ranging), other sensors and cameras to prevent misuse and inefficient use of the machine and to ensure safety by increasing the interaction of the operator who is away from the machine. With these systems, it is aimed to automatically assist the user by collecting and analyzing the work site data.

## SUPERIOR USER COMFORT

Designed to be integrated into any environment, Teleopera workstation offers a more comfortable and easier use than industrial consoles with its joystick and user interface equipment. In this way, it is aimed that the user can work efficiently and away from the negative conditions of the field.
